/892/ The Nongkrem Puja in the Khasi Mountains (Assam) (1)

126 1. All the pictures attached to this article are prepared from photographs taken by P. Frumentius Stegmiller, S.D.S., missionary in Shillong. The photographs were in part very difficult to take as they had to be made without being observed and in some cases the day was already well advanced.

by P. Dr. C. Becker, S.D.S., Apostolic Prefect of Assam.

631 About five English miles to the east of Shillong, the chief town of the Khasi Mountains, lies the town of Nongkrem. It is the seat of the king (u S'iem) who governs the state Nongkrem of Khyrim, the largest of the 25 Khasi little states and which is partly independent (semi-independent) of the English government. Nongkrem is best 796 782 known for the great sacrifice, simply called Nongkrem Puja or also ka Pom blang-u-S'iem Nongkrem (Slaying the goat of the S'iem of Nongkrem) which takes place there annually. This festivity offers, as little else does, an instructive insight into the religious and social views and customs of this interesting mountain people and should therefore be given a concise description, which may be divided into three parts:

I. The Preparations for the Sacrificial Feast.

II. The Sacrificial Feast.

III. The Celebration that Follows.

I. The Preparations for the Sacrificial Feast

793 643 Just as matriarchy prevails in the family among the Khasi so a similar arrangement has been kept in the management of the Khasi state, Nongkrem. In the state the S'iem is not the actual head but a high priestess, called ka S'iem sad. Sad means the divinity which watches over the royal race. The temporal government is transferred by the S'iem sad to the S'iem; he acts as her authorized agent although independent in his decisions working with his advisers, whose advice he must obtain in matters of importance. The moneys of the kingdom

rude stone monuments. At the village of Nougshai, near Shillong, are to be seen some very striking monoliths; and although they do not come up quite to the length of those at Nurtiang (noticed by Dr. Hooker in his "Himalayan Journals"), yet they are very worthy of being mentioned. They stand on the open spur just above the village, and have been worked out of the beds of the Shillong sandstone series, and some of the smaller blocks have been taken from the conglomerate beds, the lowest in the series, and which come in, in the bed of the ravine, to the north of the spur. There are a number of monuments on this site, large and small, arranged both in line and on two sides of a square; the two largest have their central monoliths—height, 24 ft. 3 in.; width, 5 ft. 6 in.; thickness, 8 in.; and height, 23 ft. 2 in.; width, 2 ft. 9 in.; thickness, 1 ft., respectively.

Plate ii., which is taken from a photograph by Mr. William Robert, Assistant Surveyor in the Khasi Hills survey party, gives an excellent idea of the second largest structure, showing the very massive flat-stone, the "Mao Kynthai," in front. This structure consisted of thirteen upright stones, which could not all be brought into the field of the camera; but the six outside stones on the right are shown. Many of the slabs in the adjacent monuments have been overthrown and broken quite recently, perhaps by Sepoys and camp followers from the military station close by. At one time a mountain battery of Eurasian Artillery was quartered there, and I attribute the overthrow of so many of the stones in the neighbourhood to their handiwork, who would look on such amusement as a "great lark." The Sepoy (native of India) is not of a mischievous disposition; the European and half-European (uneducated) is markedly so. Thus the monument with the highest stone is imperfect, and it must, when perfect, have been a very handsome one. This is a sad pity, after the time and labour that must have been expended in its erection.

I did not observe any new slabs anywhere in the immediate neighbourhood. Nougshai must formerly have been a large and powerful village; it stands on a naturally very strong position, and old lines of fortification are to be traced on many sides, especially on the approach from the direction of the Falls of the Umiam. These old lines of defence are on a curious system: a ditch and bank have been carried forward from the main defences from 200 to 300 yards down the ridge of the spurs, thus effectually preventing an enemy working round the hill-sides below the villages.

This fortified site points to a state of things in these hills when the relations between the large village communities or

clans were very much as we find them at the present day among the Nagas and Kukis, beyond and bordering our present extreme limits, viz. that of constant feud. They are now the quietest, most peaceful, and contented of all the hill people on the eastern frontier.

In my former paper I did not allude to the cairns in these hills, which I am inclined to think, are works of greater age than the stone structures. The custom is one that certainly has long since been given up, for I could not obtain any satisfactory account of them. They are only to be seen on the northern side of the Khasi plateau, and Dr. Hooker, in his account of his trips to the Kollong Rock, did not fail to notice them. About Mairaug and towards Nougstoin they are very numerous, and always stand on commanding situations. On the path leading down the grassy spur to the stone monuments previously described, near Nougshai, is a very fine large example of a cairn, about eight feet high. They are usually plain hemispherical mounds of earth; but this one is faced all round at the base with slabs of stone about four feet high; they are frequently not higher than six feet. A distant view is shown in Plate iii.

Nowhere is there any trace of the earth that forms them having been excavated close by; it must, therefore, have been carried in some short distance, to avoid unsightly hollows near the structure. I should much like to have dug into one of these cairns, but was afraid to hurt the feelings of the people by doing so. They are very probably cinerraries of an earlier form to those now made of stone, and this point it might be interesting to clear up.

Beyond the Khasi area no cairns are to be found, at least I had never come across any until visiting North Munipur last winter (1872—73), where, at the head of the Imphal river, on the direct road from Samaguting, are four fine cairns, all faced with large boulders. They are old, and the Nagas now living in the village near said they had been made by another clan of Nagas, who long ago had gone further north, and the site of whose village had been lately re-occupied by Kukis.

Mr. C. B. Clarke, in a paper read lately before your Institute, refers to the different forms of the cinerary in the Khasi Hills; but he has not quite exhausted the subject, or got further than I did, although with regard to the disposal of the ashes of the dead he gives some further interesting particulars.

As I think that drawings are of very great interest, and better exhibit the many different forms of bone depository or cinerary that have been adopted at different periods by tribes inhabiting localities very far apart, and often quite unconnected affinitively,

I give a sketch of a form of cinerary meriting attention, and not hitherto noticed (Plate iii.). Several of this form may be seen on a low spur near the Bazar of Jeddo at Shillong. The cinerary is above ground, and stands on a slightly raised platform; it consists of four thick stones, about three feet high, set on edge, and capped with a heavy top-stone; and, so far, it resembles the usual form, a figure of which is given in my first paper.* The approach to all these depositories is from the eastward by several low steps, and the whole structure is enclosed on three sides by large flat slabs (in the rough) standing on end—the largest being placed round the cinerary itself, overtopping it by three to four feet, and the remainder, thence diminishing in size, stand on either side of the steps. There are about six such monuments along the ridge of the spur, and I have seen no others similar elsewhere. They have been broken into, and the front stone removed, very probably by camp followers from our regimental bazar, which is close by. There is thus a double probability of their ultimate destruction altogether, should the station be extended in that direction.

Explanation of Plates II. and III.

Discussion.

000

The President said that the paper of Lieut. de Crespigny, on the Milanows of Borneo, contained a great deal of extremely interesting information, especially in relation to their religious customs; the author, however, attempted to connect the Milanows with the inhabitants of Timor, through the similarity of their religious beliefs. He (the President) did not venture to express any opinion on this point, not having any grounds for forming one. He thought, however, that, as a general rule, evidence of identity of races, derived from the comparison of the religions of savages, must be received with caution, especially in the absence of any information as to physical resemblance. The attention that is devoted to religion arises from the interest that is taken in the subject, rather than from the value of the evidence it affords of connection with other peoples. There must always be a great liability to error in the accounts of the religious customs of savages. Inquiries into the resemblance of the arts of different people, about which there could be no mistake, were, he thought,
